ADDENDUM 1
ST. MARTIN UPPER AND EAST ELEMENTARY SCHOOLS HVAC UPGRADES

Date: April 11, 2023

Project #: 0155.22.008

Project Name: ST. MARTIN UPPER AND EAST ELEMENTARY SCHOOLS HVAC UPGRADES
1100 Yellow Jacket Rd.
Ocean Springs, MS 39565

Owner: Jackson County School District
4700 Colonel Vickrey Road
Vancleave, Mississippi 39565

To: All Prospective Bidders

From: Micah van Duijvendijk, PE

Bidders are hereby informed that the Project Manual and Drawings are modified as follows:

This Addendum forms a part of the Contract Documents and modifies the original Bidding Documents with a submittal signed and stamped date of March 8, 2023. It is the General Contractor's responsibility for providing proper acknowledgement and receipt of this Addendum in the Bid Forms/Document.

Attachments to this Addendum: As described herein

Total Number of Pages in this Addendum: 59 Pages

PART A: GENERAL ADDENDUM, BIDDING, AND/OR PROJECT NOTES:

A1. Pre-Bid meeting sign in attached.
A2. Pre-Bid meeting agenda attached.

PART B: CONTRACTOR QUESTIONS WITH RESPONSES (Responses are in RED)

Note: If you do not see your question answered, then we are still researching or working on a solution.

B1. MD101 and MH101 indicate to remove and replace ET-1. MH601 does not specify a new ET-1, but a new AS-1. Please confirm the ET-1 is supposed to be tagged AS-1, and that no work is to be done on the expansion tank. Confirmed. AS-1 is mislabeled as ET-1 on MD101 and MH101. The existing expansion tank is to remain as is.

B2. Sheet MH50 detail 5 shows insulation on the secondary condensate drainage. Typically, secondary condensate does not get insulated, please confirm if the secondary is to be fully insulated as detailed. Confirmed. The secondary condensate piping is to be insulated as specified.

B3. HVAC Note B indicates that adjustable elbows are not acceptable. Would adjustable elbows be acceptable if all seams were properly sealed? Yes, adjustable elbows are acceptable for this particular project when seams are completely sealed with duct mastic.

B4. HVAC Note H indicates the use of Copper condensate Piping. The existing condensate piping is PVC and the spec section 23 21 13 indicates PVC is acceptable. Please confirm PVC is acceptable. PVC is acceptable.

B5. The existing Air Separator does not have any shutoff valves. This would require the entire heating water system to be drained and refilled to be replaced. Please advise if a full chemical treatment and full test and balance will be required of all HVAC systems on the heating water system. A full chemical treatment will be required for the system if it is completely drained. A full test and balance of all HVAC systems on the heating water system is not required. A test and balance is required for all new equipment installed.

B6. Is the contractor responsible to warrant any material or equipment not specified in the current scope of work should any issues arise because of the chemical treatment or testing, adjusting and balancing? No.

B7. Can existing refrigeration lines be used if deemed in satisfactory condition and proper size? Yes, provided that the re-used pipes are isolated, flushed with a refrigerant flushing agent, purged with nitrogen, and a vacuum pulled on the piping prior to being connected to the new units and put back into service with the new refrigerant. The refrigerant system tests for the new system shall be followed as specified after the flushing procedure.

B8. Are as built drawings available for the existing systems at both locations? If so, please provide. Existing design (not as-builts) drawings are available for the Upper Elementary. They are included in this addendum. There are no existing drawings available for East Elementary.

B9. The East Elementary was verified to have localized controls. Please confirm we are to replace with like kind. i.e. no building management system, graphics, integrations, or similar. Confirmed.

B10. Will temporary heating and cooling be required? No.

B11. The Air Handling Unit Schedule on MH601 indicates the units to be mounted on NIS vibration Isolation and the fans to be spring isolated. Please advise if only the fans are to be isolated, or the unit frame AND Fan are both to be isolated. (Typical AH-1, AH-2, and AH-3) Fans shall be spring isolated and unit frame shall be NIS isolated as specified.

B12. The Air Handling Unit Schedule on MH601 indicates the units to be provided with a stainless-steel drain pan. Existing drain pans are galvanized steel. Please advise if galvanized still is acceptable. The internal drain pans for the units shall be stainless steel as specified. The secondary drain pan for AH-3 can be galvanized as specified.

B13. The documents do not indicate a condensate pan for B-1. Please advise if one will be required. A condensate pan will not be required.

B14. P-1 does not indicate providing a triple duty valve. Please advise if a triple duty valve will be required. Specification section 232123.3.02.D and 232114.30.1.E requires a combination valve on the pump discharge. Specification section 232114.2.04 provides details for the combination valve.

B15. The Air Handling Unit Schedule on MH602 indicates the units to be provided with a stainless-steel drain pan. Existing drain pans are galvanized steel. Please advise if galvanized still is acceptable. The internal drain pans for the units shall be stainless steel as specified. The secondary drain pans can be galvanized as specified.

PART C: DRAWING CLARIFICATIONS, REVISIONS, AND ADDITIONS:

C1. MH101: Install new shutoff isolation valves at the new air separator and provide new local controls for all equipment. Replace this sheet in its entirety.

C2. MH102: Provide new local controls for all equipment. Replace this sheet in its entirety.

PART D: SPECIFICATION CLARIFICATIONS, REVISIONS, AND ADDITIONS

8" PRECAST CONCRETE WALL PANELS – (TILT-UP)

1. MINIMUM REINFORCING (UNLESS NOTED OTHERWISE)
   - #4 AT 8" VER., #4 AT 12" HOR.
   - 2#5 AT ALL EDGES OF OPNGS, EXTEND 2'-0" BEYOND OPNG.
   - 2#5 CONT. AT ALL PANEL EDGES
   - 4#6 VER. AT WALL WIDTHS 3'-0" OR LESS, FULL HEIGHT OF WALL
   - 4#6 VER. FULL HEIGHT OF WALL AT EACH ROOF BEAM SUPPORT.
   - PROVIDE ADDITIONAL REINF. WHERE NOTED AND AS REQUIRED FOR HANDLING AND ERECTION.
   - SEE WALL ELEVATIONS FOR TYPICAL REINFORCING DETAILS.
2. REINFORCING SHOWN IS ADEQUATE FOR NORMAL TEMPERATURE AND BUILDING STRESS CONDITIONS. CONTRACTOR IS RESPONSIBLE FOR SUCH ADDITIONAL REINFORCING AND/OR CONNECTION HARDWARE NECESSARY FOR PROPER FABRICATION, TRANSPORTATION, AND ERECTION OF WALL PANELS WITHOUT DAMAGE TO UNITS.
3. TYPICAL MINIMUM WELDED CONNECTIONS ARE SHOWN ON THE PLANS. EACH WALL PANEL TO HAVE INSERTS AT EACH CORNER WITH MAXIMUM SPACING BETWEEN CONNECTIONS OF 8'-0".
4. CONCRETE: 28 DAY STRENGTH: 5000 P.S.I.
5. CONTRACTOR IS RESPONSIBLE TO PROPERLY BRACE PRECAST WALL PANELS FOR STABILITY AND TO OFFER RESISTANCE TO ALL WINDS, ACCIDENTAL IMPACT, AND LOADS WHICH MAY BE IMPOSED DUE TO OTHER CONSTRUCTION OPERATIONS. PROVISIONS SHOULD BE MADE, BOTH IN THE PRECAST PANELS AND THE SUPPORT SYSTEM, TO PERMIT IMMEDIATE BRACING OF THE PANELS. ARRANGEMENT OF SUCH TEMPORARY BRACING SHOULD BE SUCH AS NOT TO INTERFERE WITH ADJACENT ERECTION AND OTHER CONSTRUCTION PROCEDURES, AND THE BRACING MUST BE MAINTAINED UNTIL PERMANENT CONNECTIONS AND STRUCTURE IS PLACED. TEMPORARY SUPPORTS AND BRACING TO BE DESIGNED WITH A SAFETY FACTOR OF 2 TO WITHSTAND WIND LOADS IN ACCORDANCE WITH STANDARD BUILDING CODE (SBCCI) REQUIREMENTS, BUT NOT LESS THAN 20 P.S.F.
6. SUBMIT DESIGN OF UNITS AND CONNECTIONS WHERE OPENINGS, ARCHES, OR MINIMUM HANDLING SIZES REQUIRE SLENDER COLUMN WIDTHS OR OTHER DETAILS NOT SHOWN IN TYPICAL WALL ELEVATIONS. PROVIDE PLATES, ANCHORS AND WELDS TO TRANSFER SHEARS AND MOMENTS ACROSS PANEL JOINTS AND TO TRANSFER LOADS TO FOUNDATIONS. ALL DESIGN DOCUMENTS SUBMITTED FOR REVIEW SHALL BE STAMPED AND SIGNED BY A REGISTERED PROFESSIONAL ENGINEER.

NOTE A – CONSTRUCTION JOINTS

TYPICAL PRECAST (TILT-UP) WALL PANEL WIDTHS AND CONNECTIONS ARE SHOWN ON WALL ELEVATIONS FOR ESTIMATING PURPOSES. CONTRACTOR MAY ADJUST PANEL WIDTHS FOR HANDLING AND ERECTION OPERATIONS. ALL CONSTRUCTION JOINT LOCATIONS TO BE DETERMINED BY ARCHITECTURAL REVEAL PATTERN AND MUST BE APPROVED BY ARCHITECT AND ENGINEER. ANY CHANGES MAY REQUIRE ADDITIONAL WALL CONNECTIONS AND REINFORCING. REFER TO PRECAST CONCRETE NOTES.

REFERENCE NOTES

1. VERIFY ALL DIMENSIONS.
2. REFER TO ARCH. DWGS. FOR ALL DIMENSIONS, OPENINGS, AND OTHER WALL DETAILS.
3. REFER TO MECHANICAL DWGS. FOR ADDITIONAL OPENING REQUIREMENTS. ALL OPENING LOCATIONS MUST BE APPROVED BY ARCHITECT AND ENGINEER.
